

Historic Olivehurst Pipeline Replacement Project - Addendum 3 Changes

Specifications

Section 01 11 00 – Summary of Work

- Bid item 5 – Pothole of Existing Utilities has been updated to indicate that this bid item is specific to potholing of the mainline only and should be bid on unit cost. This is for the purpose of informing the District and the Engineer of underground utility locations, depths, sizes, etc. prior to construction in order to determine if revisions to the design are necessary.
- Please note that potholing efforts for new water services are to be bid as part of the unit cost for installing each service, the number of existing utilities requiring potholing will be different for each type and location.

Document 00 41 13 – Bid form

- Bid item 5 – Pothole of Existing Utilities has been revised to provide an accurate estimate for the number of potholes (previously summarized as lump sum in the summary of work).
- Bid item 33 - Pavement Restoration has had its quantity increased. The purpose is to account for additional restoration that may be required on Olivehurst Ave. The County has not provided specific limits of restoration so we assume any disturbance to an individual quadrant of the impacted intersections will require a complete grind, overlay and restriping of that quadrant to the curb return.
